Abstract
The League of Legends gaming community lacks a useful, powerful, centralized, and convenient solution to game references that is easy to use.

Project Description
What
Leagueology is an Android application which provides a comprehensive guide for League of Legends champions and items.

Why
Having an Android application is more accessible and convenient than other options while searching for game information.

Who
Users that benefit from Leagueology are individuals in the gaming community who play League of Legends.

Process
Structured Analysis for concept to logical design; Agile iterative method for build to deployment.

Features
- Provide a comprehensive list of items and champions.
- Provide a search bar to quickly find what the user wants.
- Provide guides for each champion.

Lessons Learned
- How to build an Android app in Android Studio.
- How to store and retrieve data from a NoSQL database.
- How to manage a team development project with version control software.

Technologies
- Android Studio
- GitHub
- Google Firebase
- Studio Visual Code
- JIRA SCRUM

Future Work
- Add a build comparison calculator.
